System Analyst
MIS, DG Health Services

INTRODUCTION

During the period 1996-2001, Government planned to establish Community Clinic at the village level to extend Primary Health Care at the door step of the rural people all over Bangladesh. HPNSDP 2011-16, planned to establish 18000 Community Clinics all over Bangladesh. Present Govt. has taken initiatives for Revitalization of Community Clinic as the top-most priority project in Health Sector. There is 1 Community Clinic for more or less 6000 rural population. Community Clinic is a small clinic at the grass root level including the remotest and hard to reach area. It is basically meant for health education (on health, nutrition & FP), health promotion and treatment of minor ailments, first aid, and identification of emergency & complicated cases to establish an effective referral linkage with the higher facilities i.e. UHFWC & UHC for better management. Currently we have 12,495 community clinic functioning. Community Health care provider (CHCP) is the service provider at Community Clinic. MIS-DGHS has already provided 3500 laptop to CHCP for reporting purpose and with collect demographic and case base information from each community clinic. All the CHCP will be provided laptop by 2013.

PURPOSE OF COLLECTING GEO-COORDINATE FROM COMMUNITY CLINICS

MIS has collected 90% of all the community clinic geo coordinates to see the exact location of the community clinic. This location map will help the local level planner to find the service gaps. This map will also help to find new places to build new community clinic or other health facilities.

The location will help us identifying the disease burden and evidence based decision making while planning any intervention. This map will be use by the upazila and district manager every monthly meeting for local level planning. The map will also be used by the Community groups and Community Support groups formed by the Community clinic to monitor community clinic activity.

HOW COORDINATES WERE COLLECTED

All the coordinates were collected using GPS devise (Germin Etrex) by the statistician of every upzila. The data was entered in the District Health information Software and collected centrally. The coordinates were plotted in the DHIS software for analysis and viewing the map. Around 10,000 has been collected and plotted in the map. Quality of the coordinates we checked grossly after viewing in the google map. The community which falls over the boundary were removed and checked for correction. The collection process is ongoing as as the construction of community clinic is still continuing.

LIMITATIONS

The coordinates were collected by the statisticians and there was some error while collecting the corrdinates. There was also some error happened while entering the data in the system (DHIS). The correction of the coordinates is still in process and will be completed soon.

HOW TO SEE A COMMUNITY CLINIC IN THE MAP

The DHIS software can create maps by different administrative areas to see the exact location of the community clinics. There are different type of map which can be produces in the software which are shown below.

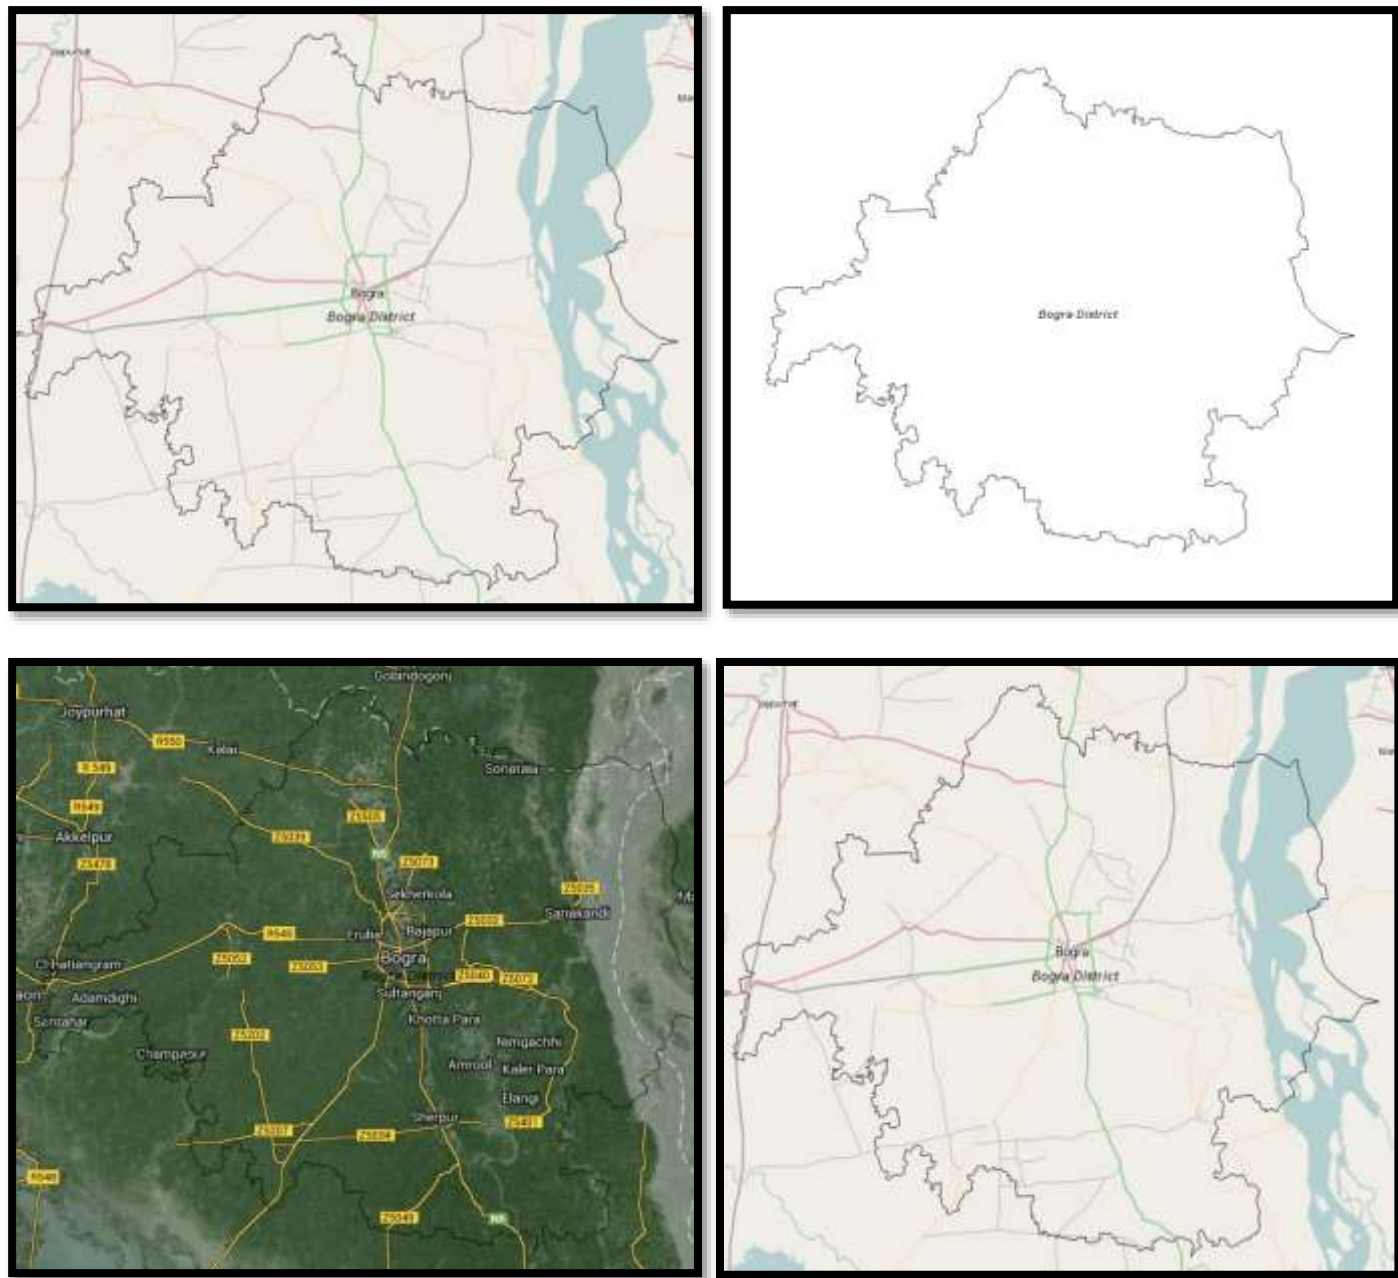

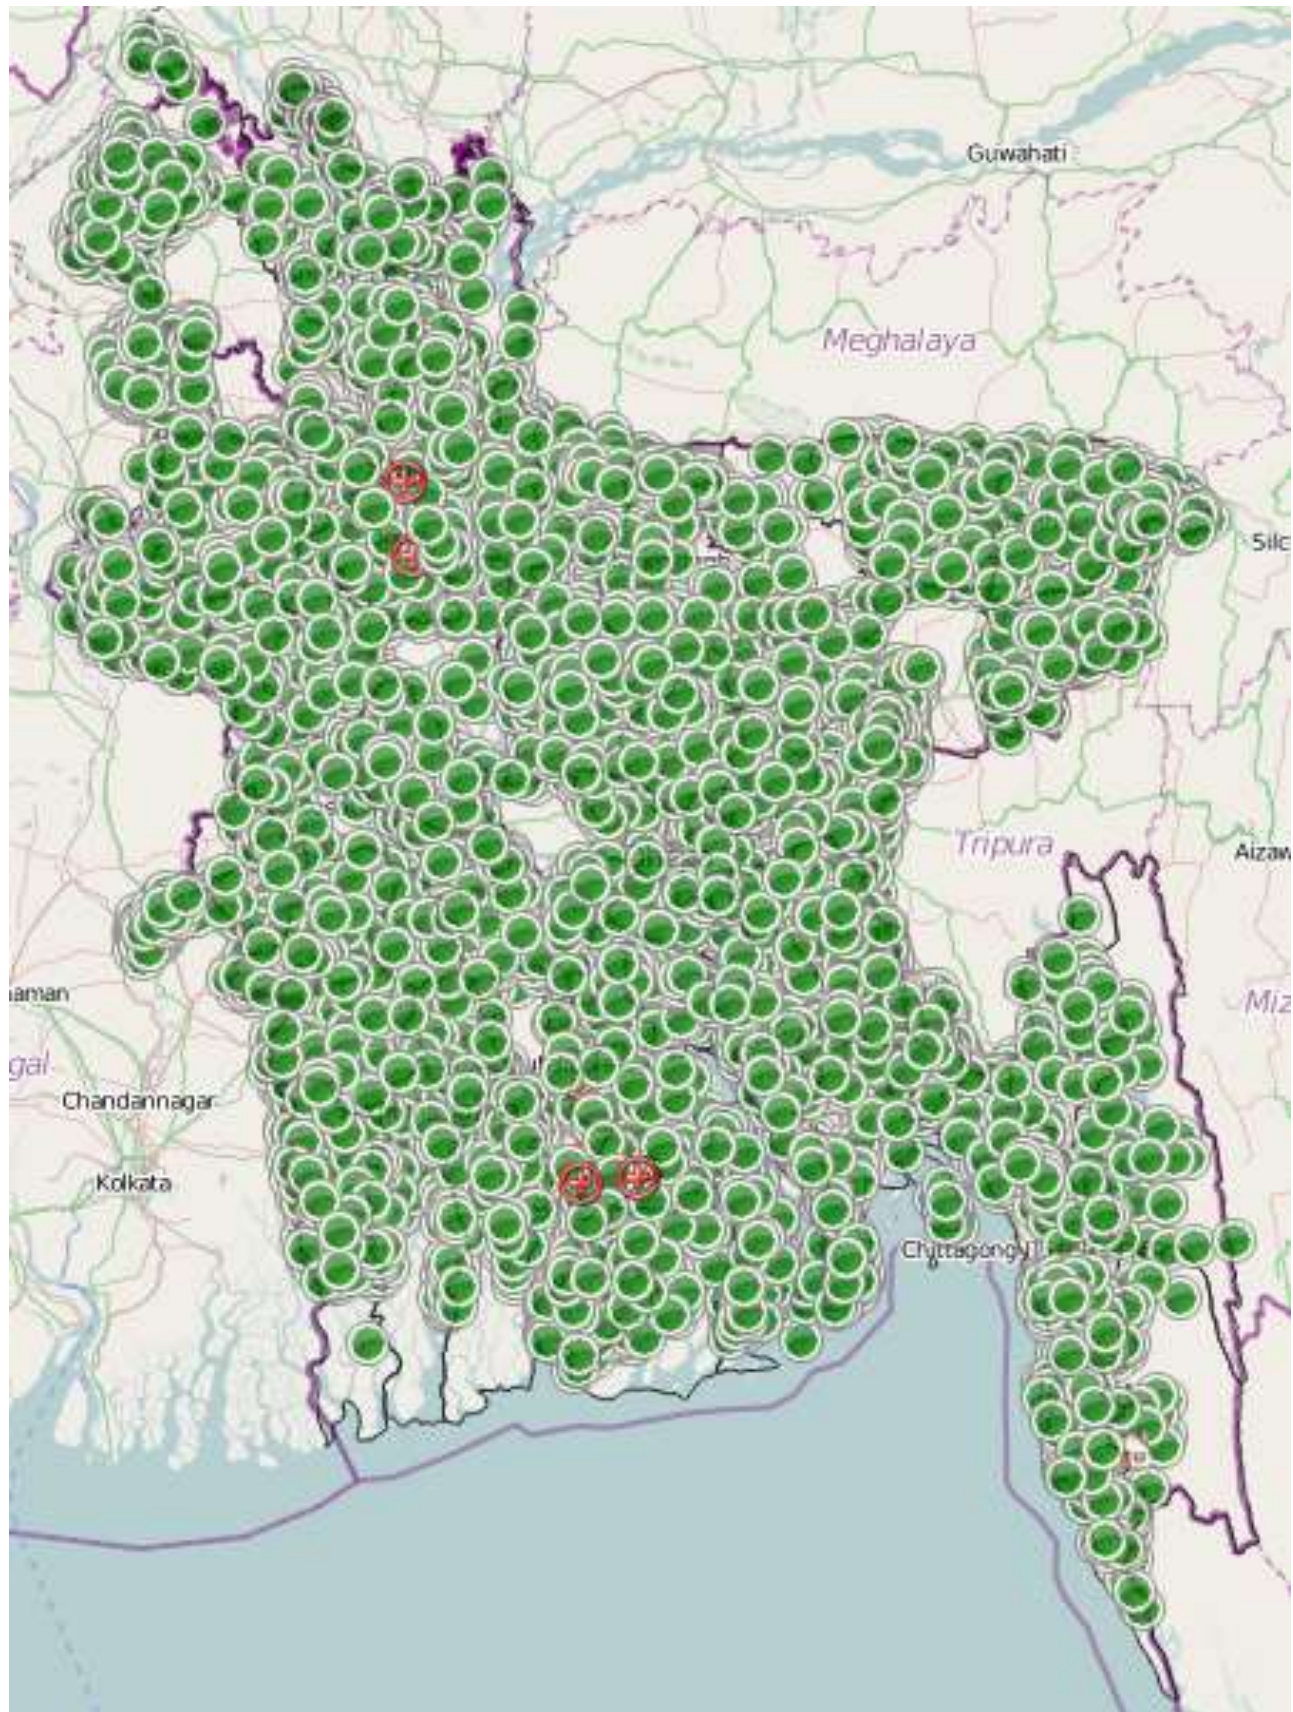

Figure: Viewing of different type of maps in the software

ALL COMMUNITY CLINIC AT A GLANCE

LOCATION OF COMMUNITY CLINIC

The software can plot all the location of the community clinic by name and location details.

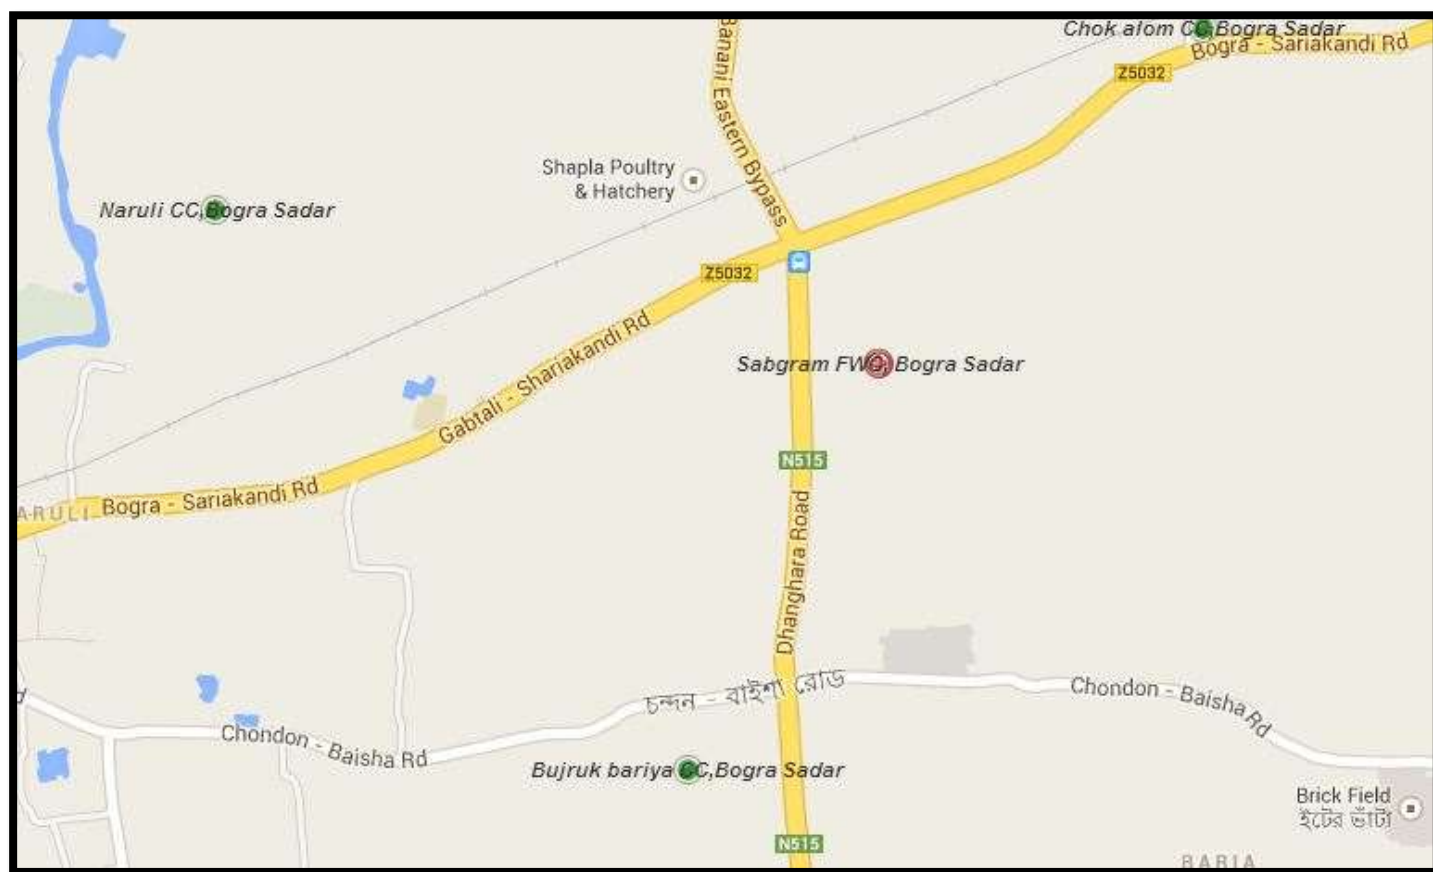

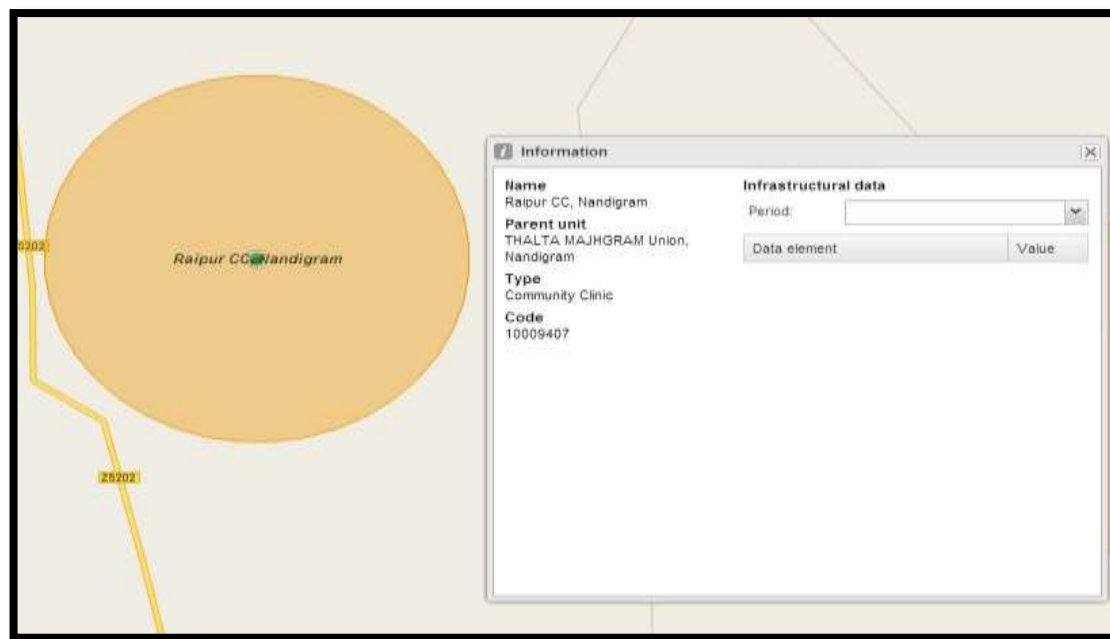

Figure: Shows different type of facility including community clinic (CC). The road and important land mark are also shown in the map.

USING GOOGLE EARTH VIEW

It is also possible to see the satellite view of the community clinic to see the real structures in the geography.

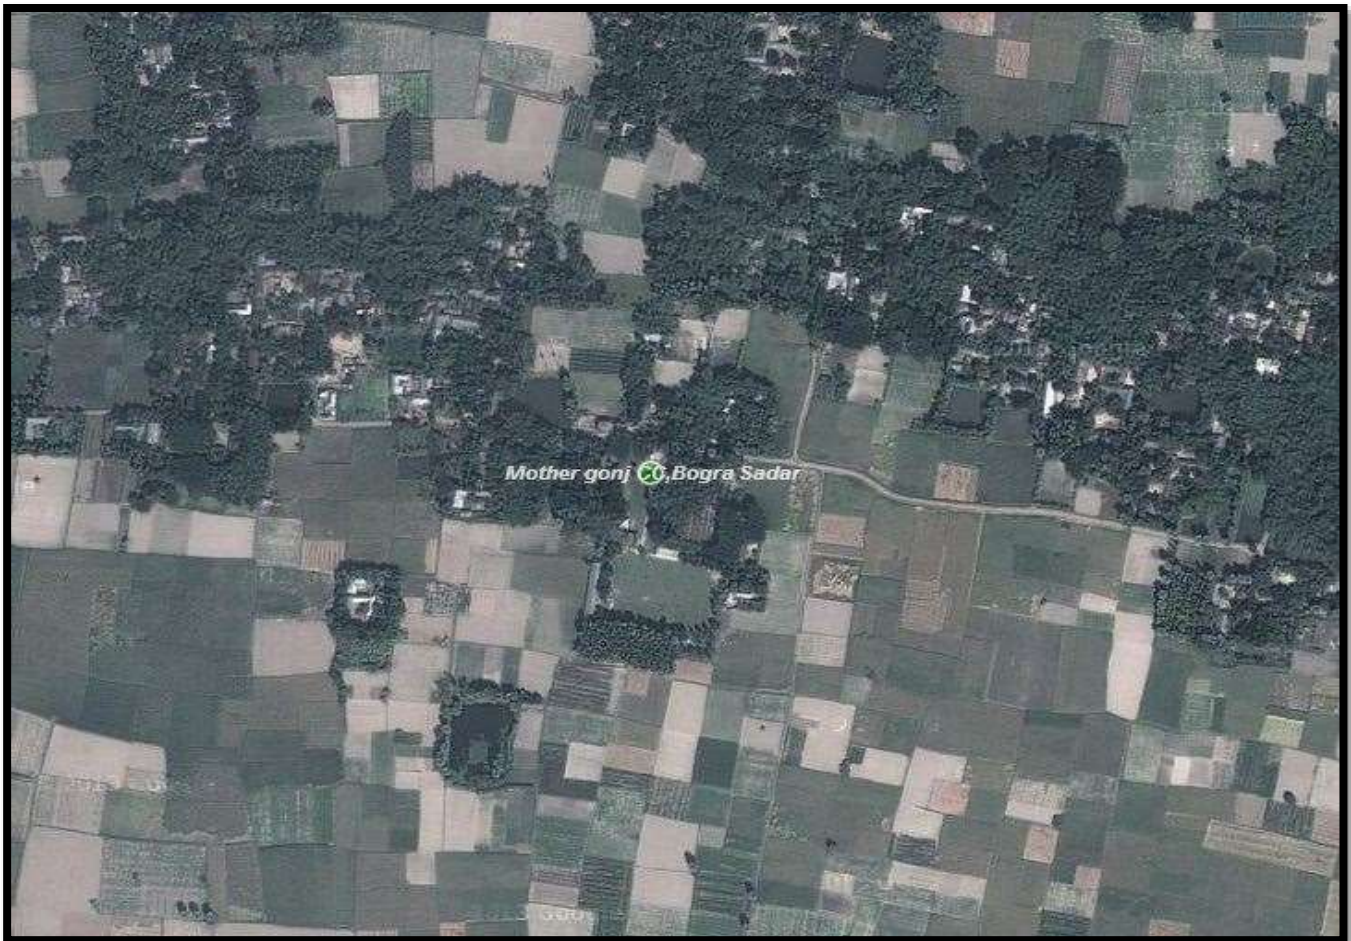

Figure: Using Google earth view to see the community clinic exact location

USING BUFFER AREAS FOR EACH COMMUNITY CLINIC

We can set a buffer area for each clinic. For example, we can analysis how many household can get services within 2 km radius. This will also help to see gap analysis.

MEASURING DISTANCE OF COMMUNITY CLINIC

The system can measure air distance from one clinic to other clinic and also from major health service points.

It can also measure exact distance by road or river from certain points.

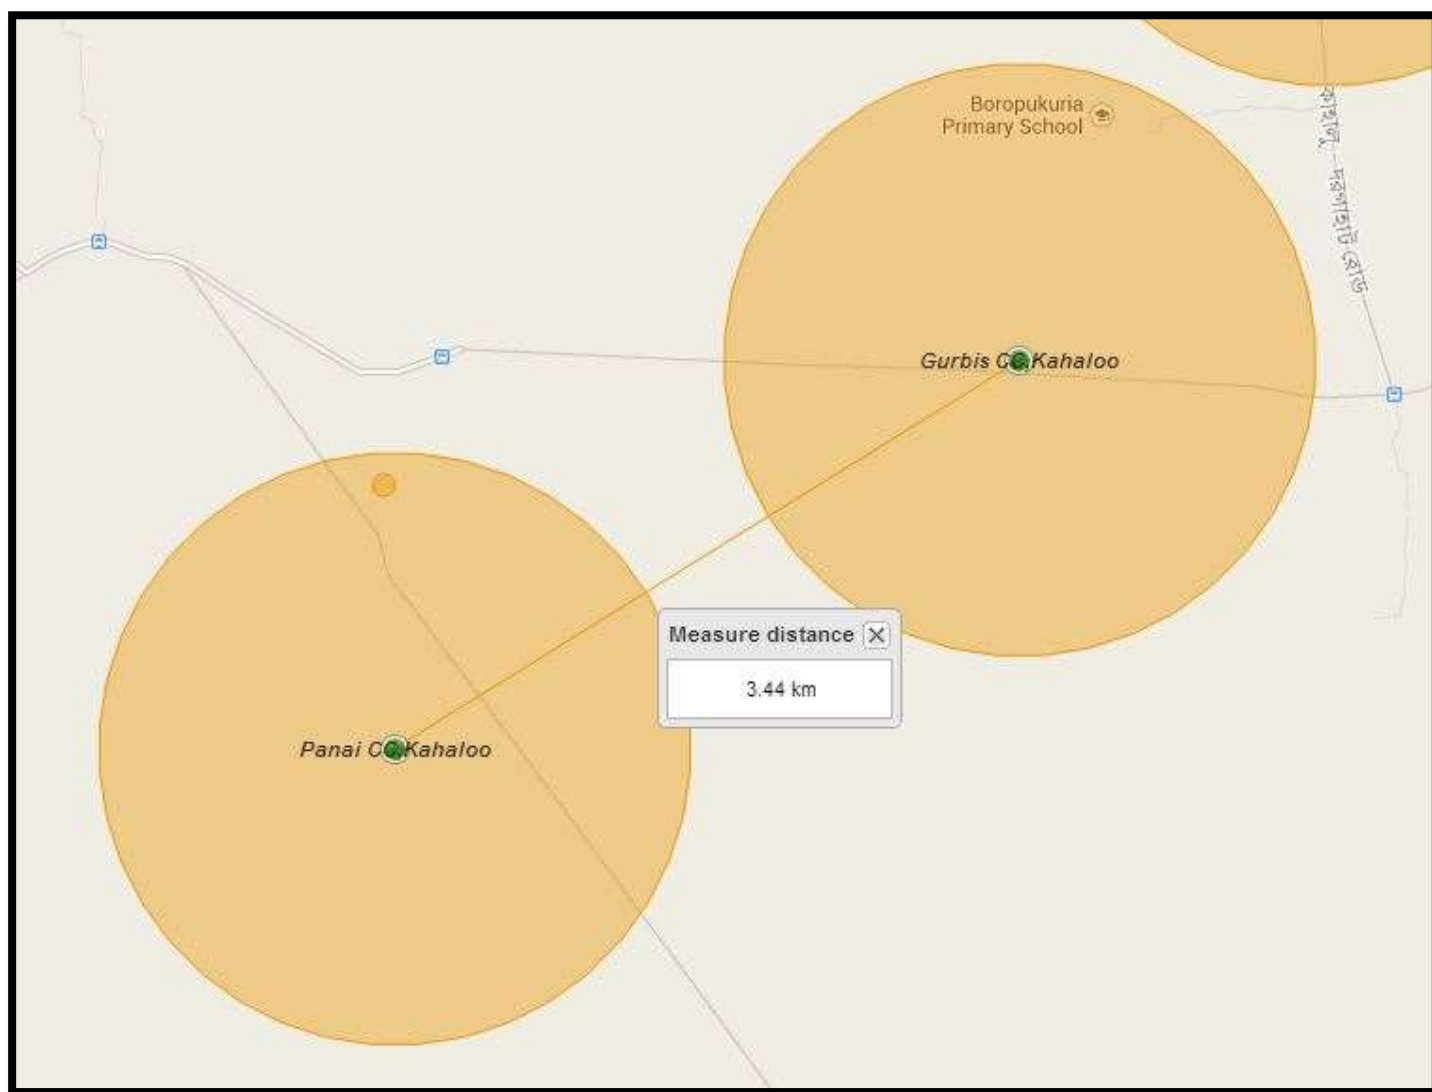

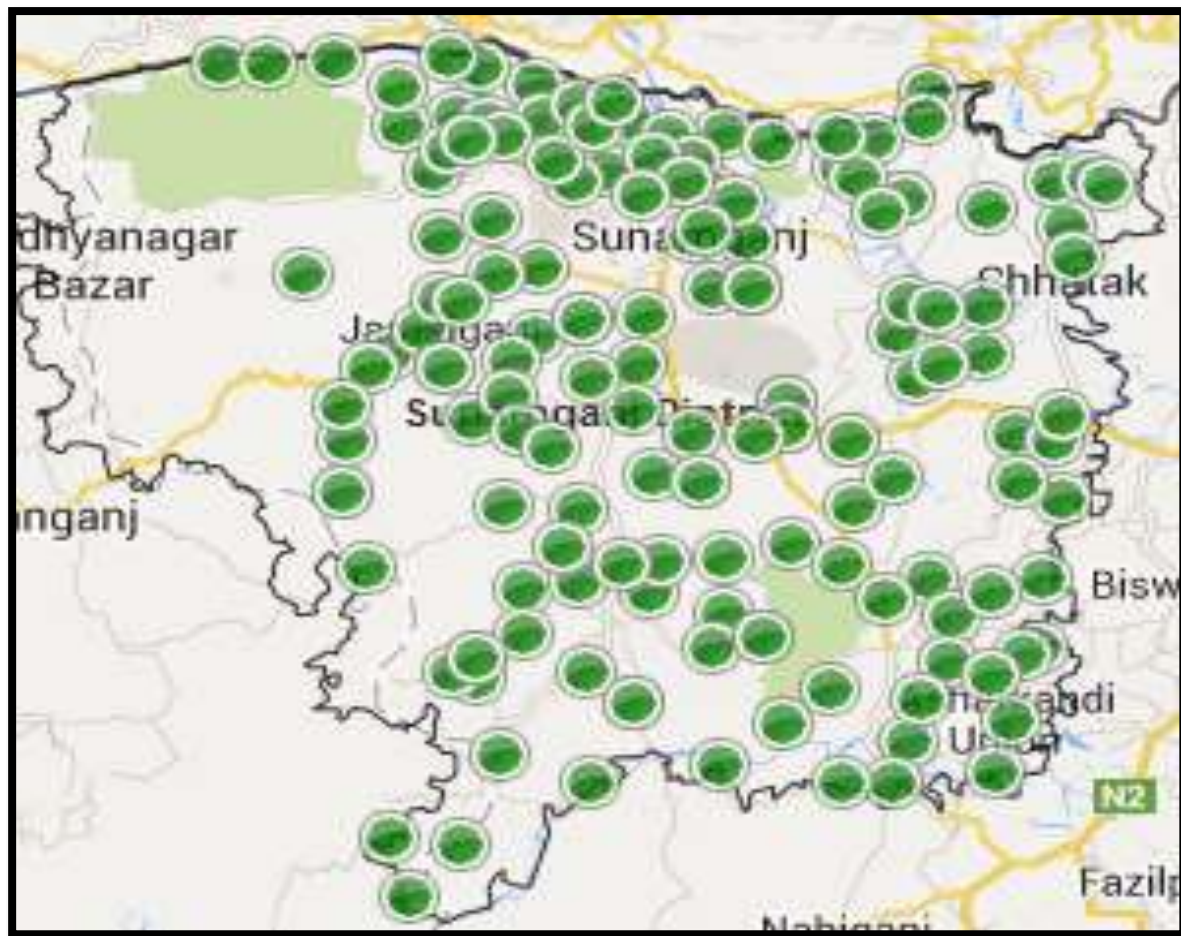

Figure: measuring air distance from one clinic to other clinic.

MAPS AND COORDINATES OF COMMUNITY CLINICS
